Any student with an overall GPA below 2.1 will not be admitted to upper-division chemical and biomolecular engineering courses. Students who have not been admitted to upper-division or provisional status are required to demonstrate the ability to perform satisfactorily in upper-division courses by completing a total of seven departmental courses with a grade of C or better in each course (including the four required for upper-division status). Permission to continue with upper-division classes depends on this minimum level of performance. Graduates of upper-division courses have the opportunity to apply for a Bachelor of Science in Chemical and Biomolecular Engineering degree. Students who have completed CBE 201, CBE 235, CBE 240, and CBE 250 with an overall GPA of at least 2.3 may apply for provisional status. Any student granted provisional status must complete the 200 level CBE course or courses in which a grade less than C was earned and achieve a C- or better to be admitted to upper-division status. Grades of C- or better in these four courses are required for graduation. Permission to continue with upper-division classes depends on this minimum level of performance. Any student with an overall GPA below 2.1 will not be admitted to upper-division chemical and biomolecular engineering courses. Students who have not been admitted to upper-division or provisional status will be dropped from upper-division departmental classes.

Students also have opportunities for an Honors Concentration. See the Undergraduate Catalog for details and requirements.
