Note: English 118- students receiving a passing grade below B in English 118 will complete the English Composition requirement by taking English 102. Students receiving a grade of B or above will complete their freshman English requirements by choosing English 102 or a sophomore level course in the English Department, or English 355.

*Beginning students who have had high school computer science and/or who have had significant programming experience (e.g. summer institute study, special research projects, home laboratory) should apply during the summer to the head of the EECS department for permission to take a proficiency exam for COSC 101. If satisfactory grade is earned, credit will be allowed for COSC 101 allowing the student to begin in COSC 102 their first term. The EECS department also gives credit in COSC 101 to students who receive a score of 3 or better on the Computer Science A AP Exam. For student who lack these experiences, they should take COSC 101 first term, pushing back courses indicated.

***Technical Electives - Must be approved by the Department prior to registration. Please see Civil & Environmental website for a pre-approved list of courses.

Environmental Graduation Requirements

Students are required to maintain a cumulative grade point of at least 2.0 in all civil engineering and environmental engineering courses taken at the University of Tennessee, Knoxville, used to satisfy the graduation requirements. No more than four credit hours of civil and environmental engineering courses in which a C- or lower is the highest grade earned may be counted toward graduation. Students must earn a grade of C or better in all courses within their two selected concentrations. Students are strongly recommended to meet with their faculty advisor every semester.

Students also have opportunities for an Honors Concentration and/or a five year BS/MS program. See the Undergraduate Catalog for details and requirements.

¹ The construction concentration sequence does not have a dedicated lab unlike the other concentrations. For this reason, students may either take the geotechnical or structural lab to complete this course sequence. However, students may not double-count concentration labs (e.g. if your chosen concentrations are construction and structural, you may not use the structural lab to satisfy the construction sequence and must take the geotechnical lab to complete the construction lab requirement).

Volunteer Core courses highlighted in light orange.
