Lego Building Competition

Hosted by The Institute for Industrial and Systems Engineers (IISE)

RULES:

- Each team must consist of 2-4 people

- You will be given instructions on how the model is built, but you do not have to build the Lego model in the same order that the directions show. It is up to your team to decide how to make it.

- Lego parts can be spread out/positioned however the team would like

- The team has the option to create roles for each team member while building (you may want to discuss this during your minute of brainstorming)

- Not all team members have to be used to build the Lego design

- No Lego parts can be connected before the competition starts

- A quality check of each built Lego model is required once the team finishes the competition, completed by the game operator. If a model is not properly built, it does not count towards the competition.

- Teams can compete more than once to improve their time, if there are no other teams waiting to participate.
